

SYSTEMS DESIGNED WITH THE RV USER IN MIND!

FINALLY! A BETTER WAY TO MANAGE WATER AND ELECTRICAL HOOKUPS!

We have tailored built an Electrical Cable and Input Potable Water Hose System specifically designed for RV OEM installation, also lending itself to the aftermarket, to enhance the overall usability of recreational vehicles for RV owners.

- The installed hose or electrical system has a clean flush mounted appearance to the exterior of the RV.
- Its compact size allows it to be installed into an unseen interior RV location like a closet, behind a counter or into a closed seat bench, taking less room than loosely wound hoses and cords.
- At the same time it provides a sealed barrier for air, water, dust, insects or vermin from moving between the interior and the exterior of the RV, no matter if the spool is out or in the closed position.
- Reel RV's products have been designed and manufactured with strong exterior grade plastics. They are specifically formulated to withstand tough RV related environments such as: - damaging UVU sunlight, - ambient temperature swings, - varying exterior weather conditions as well as harmful road grime and residues.

Built Strong – Just In Case!

Contact any one of the RV Manufacturer's below who have received this product and ask for it to be factory installed on the next RV model that you bring into your show room!
